Barcode Solutions - Custom Programming - Expert Advice

RVB Systems Group is pleased to introduce an exciting new product for the sight-impaired called **Scan And Say™**. [Click here to receive a FREE DEMO of Scan And Say™.](#)

NEW LOWER PRICE - \$495

Scan And Say™ is a TALKING BARCODE PROGRAM for Windows that allows vision-impaired people to easily distinguish items. Over 250,000 items are already in the **Scan And Say™** database. You can also easily add new items.

Scan And Say™ is easy to customize. Change a product's description to whatever you want to hear. Have **Scan And Say™** announce "*My favorite ice cream*". Add cooking instructions to the food descriptions. **Scan And Say™** can even be used to create and print or read aloud a shopping list!

Use **Scan And Say™** for any item in your house, including pharmaceuticals, canned goods, cereal boxes, frozen TV dinners, frozen juice containers - the list is endless. If an item does not already have a barcode, use one of the 500 pre-printed barcodes provided with **Scan And Say™**.

Scan And Say™ can even be used to **TIME STAMP** items. This is especially helpful for remembering the last time a medication was taken, or to help track when a dairy item expires.

The barcode scanner provided with **Scan And Say™** attaches to your PC with a 15 foot cable via your keyboard port, a COM (RS-232) port, or USB

port (recommended). It can be used in hands-free mode with the adjustable mounting stand or as a hand-held scanner. The scanner emits a wide pattern of 20 scan lines instead of a single scan line, so the sight impaired can easily use this device.
